

Last time we left off on...

GoToCryptoCoin

# What we did

- Frontend is a little bit better and functional (believe us)
- Nodes can now handle requests from web client
- Blockchain is explicitly cached on every node
- Multiple nodes can now synchronously act in network

# Future plans

1. ~~Rewrite on Haskell from ground up~~ Bad idea :(
2. Security++++
3. Test everything  $\infty$  # of times
4. Fix tons of bugs
5. Get the project ready for use
6. Mobile apps?
